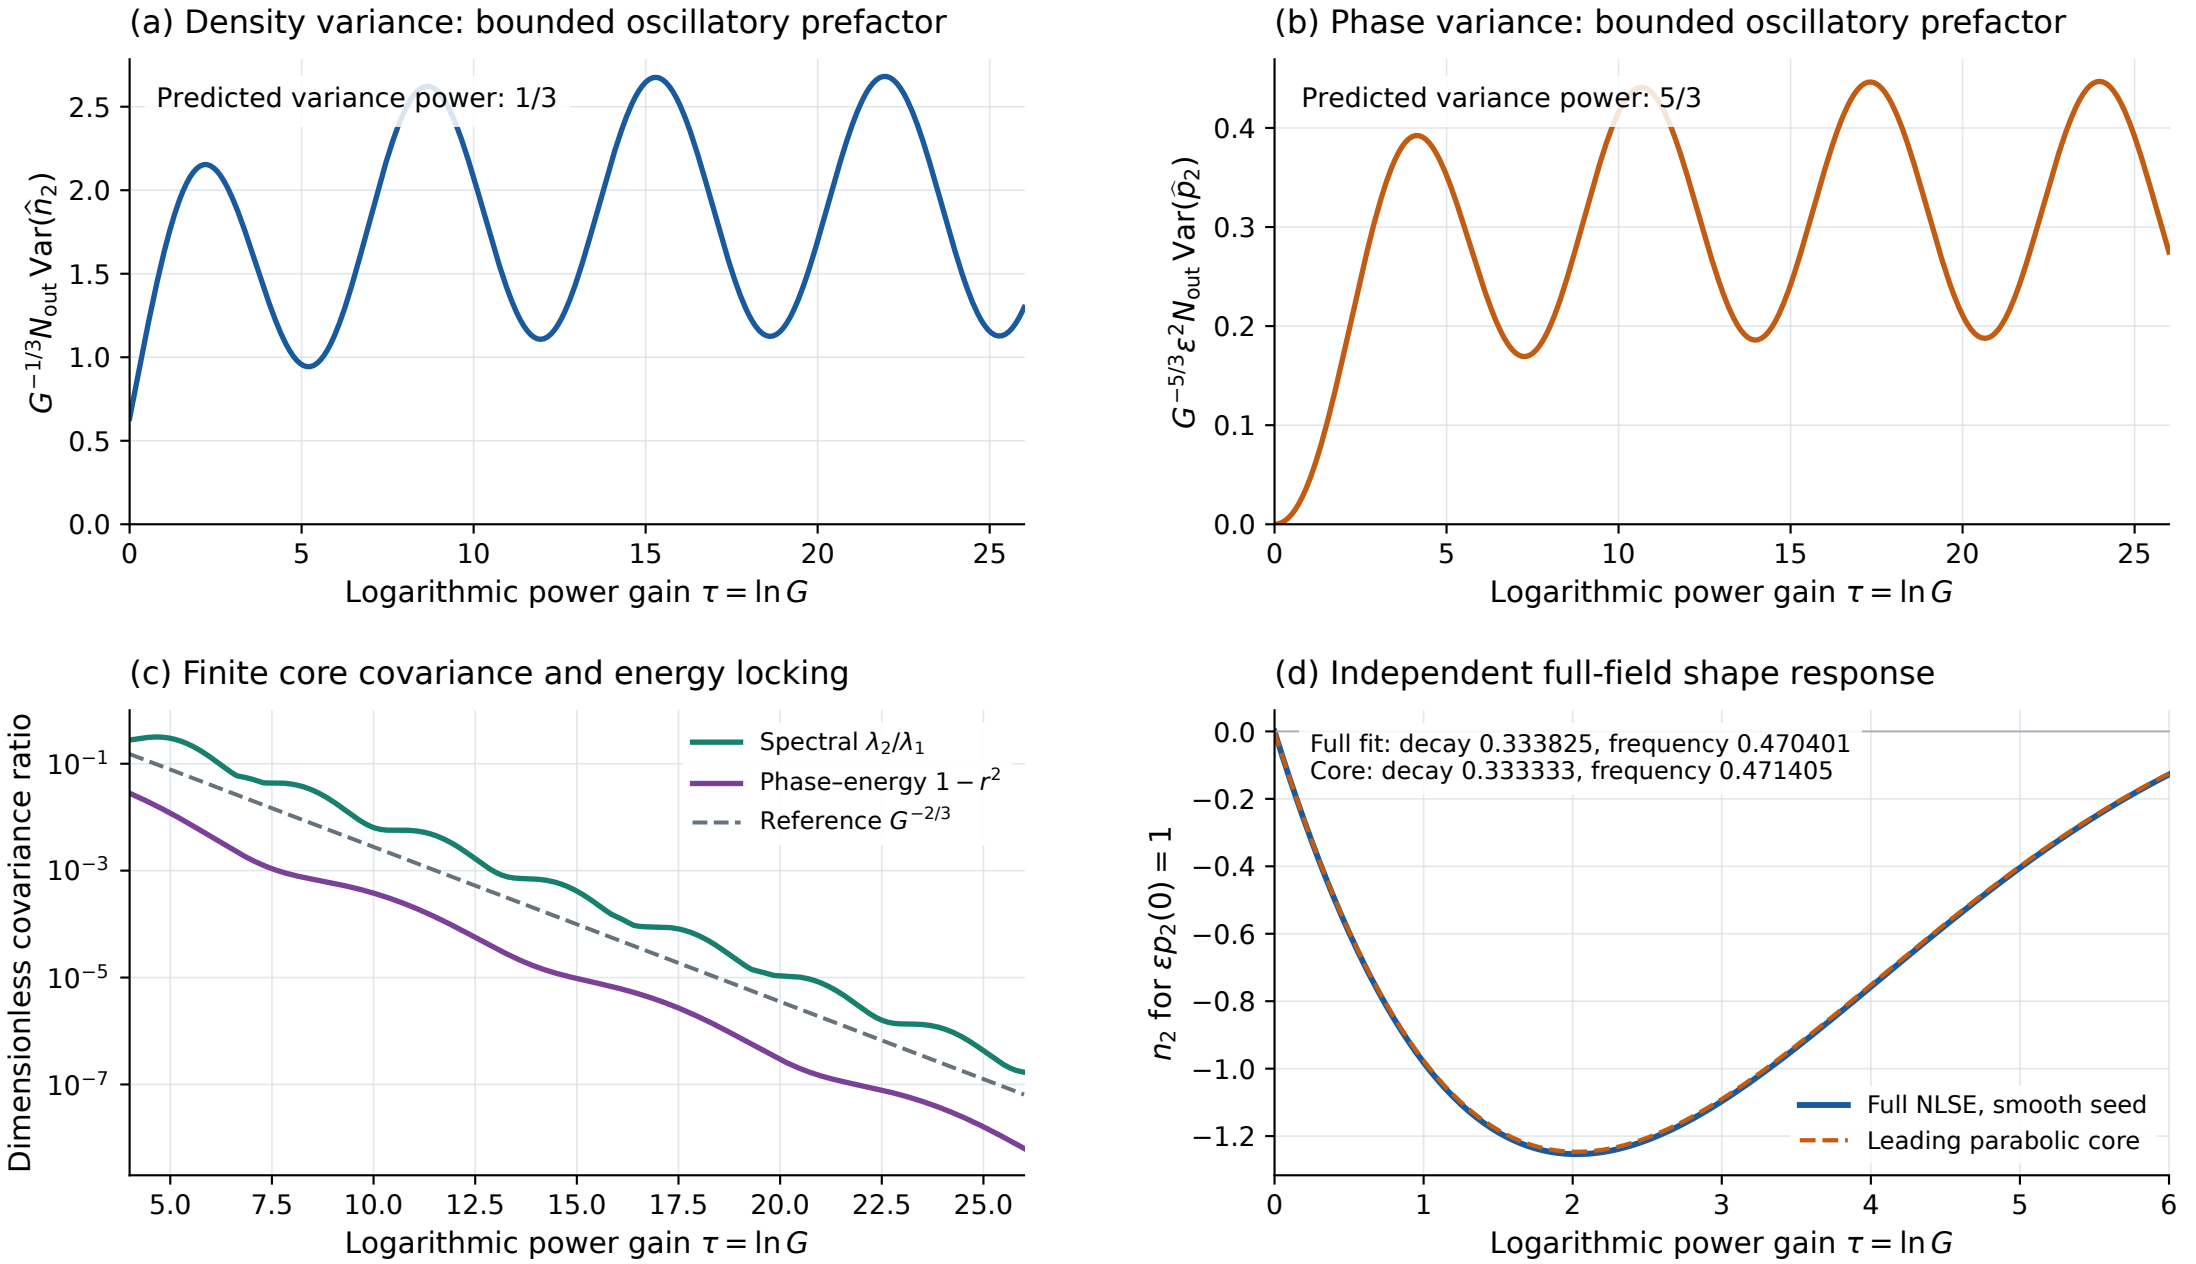
Independent amplifier-similariton verification

$\Gamma = \sqrt{18}$, $n_{sp} = 1$; asymptotic core chirp



(a–c) Real-space finite volumes, 512 cells and 8 orthonormal modes; leading density vacuum and ASE.

(d) Full NLSE with all second derivatives; $\varepsilon = 0.05$, 4096 points, $\Delta\tau = 0.001$; rounded parabolic launch.
